

The fluidlab R-300 - a powerful, portable tool to maximise your work at the clean bench.

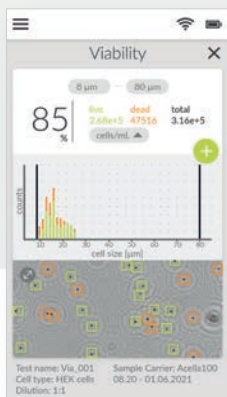

Cell Count

Label-free viability measurements via holographic microscopy
Large FoV for high statistical significance
Small sample volume needed (4-20 μ l)

Easy data transfer with our free „datalab“ software

Automated focus and cell count in < 20 sec

Label-free viability

Full spectral graph extinction

Time-series measurements

Storing of calibration curves for automatic quantification

Spectrometer

Full spectral graphs recorded from 375 to 700 nm
No maintenance and re-calibration needed
Portable and small
